

# ESS Quality Circle Announcement of Cooperation

The ESS Quality Circle powered by ESS Medical Performance is proud to announce its cooperation with German LimbTech Orthopaedic Technology.

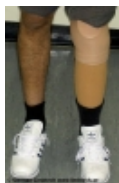

“Quality starts with Analysis of Diseases”  
is the priority to offer the highest quality of orthopaedic technology services for both adults and children.

German LimbTech  
Orthopaedic Technology  
FZLLC is a close cooperating  
partner of

ESS Medical Performance  
and Member of the ESS  
Quality Circle, based in  
Dubai.

The aim of this cooperation is to bring together the best expert knowledge in the fields of orthopaedic technology from Germany to the Middle East.

This cooperation built a highly proficient team where people can obtain the best German quality services and products including the benefit of a well established, networking team of specialists from the related fields (e.g. establishment of cooperation with specialists from other GCC-related areas, further education systems)

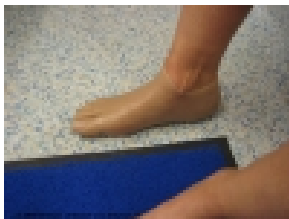

## Samples of Products and Services:

### Lower Limb Protheses

All prosthetic and orthotic devices are fabricated under German ISO standards.

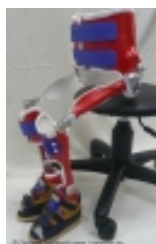

Only the best components and materials are used. The highest priority is to ensure the high quality of appliances with respect to their design, alignment, fitting, function, appearance and compliance to the indications.

## Lower Limb Orthoses

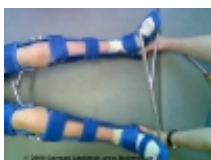

Injuries of the lower limb are very common, especially in individuals that participate in high level sporting activities. Knee and ankle braces/supports are normally recommended by doctors in pre- and post-operative cases.

The comprehensive range of lower limb orthoses cover all types of appliances required for injuries such as knee ligament damage to more complex cases such as hip/knee joint replacement.

Also custom made orthotic services for indications such as poliomyelitis, cerebral palsy and leg length discrepancy are manufactured to a high German standard here in our cooperation partners workshop in Dubai!

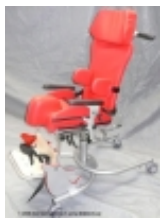

## Special Seating Systems

Individualised and integrated seating solutions for patients with sitting posture problems and incorrect body alignment. These seating systems can be used as static devices or in conjunction with wheelchairs.

The seating systems can be adapted for both adults and children who, despite physical limitations, are very active and whose movement sequences can be therapeutically encouraged and improved. The seating systems can also be designed such that they serve as passive system for fully restricted and immobile patients.

Production is carried out on the basis of individual dimensions by an orthopaedic technician. In this way, all systems can be designed individually in accordance with the physical characteristics and the degree of activity of the user.

## Wheelchairs and Home Solutions

The range of manual and electric wheelchairs are all of high quality European design and highly adjustable to suit the different needs and requirements of each user.

The wheelchairs also have the option of both custom and standard special seating designs allowing us to provide optimum comfort and functional support for individual.

For further information, appointments (patients / individuals) as well as cooperation matters (e.g. hospitals, clinics, centers) please contact:
